Second-year Computer Science undergraduate at IIIT Guwahati seeking SWE / AI engineering internships to build production ML systems. Hands-on experience with AI agents (RAG, LangGraph, GenAI) and full-stack development.

EDUCATION

Indian Institute of Information Technology, Guwahati

2023 – 2027

B.Tech in Computer Science & Engineering | CPI: 7.25

- JEE Mains: 98.4 Percentile

WORK EXPERIENCE

AEH Intern — Accenture

May 2026 – July 2026

- Built an AI agent that converts technical design documents into SAP S/4HANA-compliant ABAP code using RAG, LangGraph, and GenAI tools.
- Collaborated within an agile team, contributing to design, development, and testing of the automation pipeline.

Club Coordinator — Overbooked, IIIT Guwahati

Aug 2024 – Dec 2024

- Coordinated club events and managed member engagement across the semester.

PROJECTS

Technical Design Document-to-ABAP Code Agent

2026

Python · LangGraph · RAG · Vector DB · GenAI · SAP S/4HANA

- Designed a modular multi-agent architecture that decomposes generation into specialized stages (parsing, retrieval, synthesis, validation) for maintainability and testability.
- Engineered a semantic chunking and vector-retrieval strategy to preserve cross-referenced business logic, achieving ~90% precision in mapping requirements to ABAP constructs.
- Added an automated syntax-validation feedback loop that re-prompts the model on errors, raising first-pass compilation success from ~60% to ~90%.

Interview Coach

interview-coach-blue.vercel.app

React · JavaScript · Python · FastAPI · GenAI · Vercel

- Developed a full-stack AI-powered interview prep platform with an intelligent interview module and an automated resume analyzer, spanning 246+ commits.
- Built an AI resume analyzer that scores resumes across 5+ parameters and returns feedback in under 10 seconds per submission.
- Integrated AI-driven question generation across multiple domains with real-time performance feedback and scoring, deployed live on Vercel.

CPU Scheduler with ML Analysis

github.com/animesh-kh/CPUScheduler

Python · Machine Learning · Jupyter Notebook

- Simulated and benchmarked 4 CPU scheduling algorithms (FCFS, SJF, Round Robin, Priority) in a custom-built process simulator across 1000+ synthetic workloads.
- Applied ML models to predict the optimal scheduling strategy per workload, achieving ~85% classification accuracy.
- Generated comparative metrics — reducing average waiting time by ~25% over baseline FCFS — with detailed visualizations.

TECHNICAL SKILLS

Languages: Python, JavaScript, C/C++

AI / ML: Generative AI, LangGraph, Retrieval-Augmented Generation (RAG), PyTorch, TensorFlow, Machine Learning, scikit-learn

Frameworks & Tools: React, FastAPI, Git, GitHub, Jupyter Notebook, Vercel

DSA: Proficient in Data Structures & Algorithms; active competitive problem solver

EXTRACURRICULAR ACTIVITIES

- Sports:** District-level competitive player in both Karate and Skating.
- Model United Nations (MUN):** Active participant across multiple conferences; **3× Best Delegate** award winner.
- Debating:** Regular participant in college and inter-college debate competitions.
